Hospital Oncology Unit

Market Focus: Corporate

DIRTT was an obvious choice for this hospital's Chemotherapy and Oncology Unit Project. The client's vision was to create a space that promoted nurturing and healing by incorporating images of nature and quotes of inspiration for the patients spiritual and mental strength. To communicate the theme of nature, cool tones were selected for material finishes.

In the chemotherapy rooms, custom DIRTT finishes camouflage the integrated medical outlets.

DIRTT provided a full solution by completely integrating medical gases, full modular electrical, data, and low voltage specialty components. Patients and employees benefitted from DIRTT's inherent clean construction capabilities along with the need to phase the project and meet their aggressive schedule to ensure no interruptions to their workplace environment.
