

American  
Interiors

# Multinational Power Management Company

## Market Focus: Corporate

A multinational power management company and diversified industrial manufacturer in Beachwood, Ohio chose American Interiors to design and provide the complete interiors for the over 600,000 square foot campus. AI installed a total of 1200 Knoll workstations and private offices along with over 5700 linear feet of DIRTT architectural wall. The building structure was designed to be an open office environment fostering collaboration among its employees to increase innovation and creativity.

The project encompassed a need for a variety of furniture solutions including private offices, open workstations, collaboration areas, conferencing, café areas, lobby areas, and filing areas while meshing Knoll's modern and classic designs with the cost savings and timeless aesthetics of DIRTT architectural products.

One of the drivers of this project was to attract and retain employees, while providing beautiful aesthetics and a comfortable space full of amenities for its employees.
